The invention relates to an angiogenic composition (I) comprising at least one peptide chosen from a group of peptides containing isoleucine-glycine-aspartic acid (IGD-containing peptide), and at least one angiogenic growth factor other than the at least one peptide, where the peptide stimulates cell migration. Also disclosed is a composition (III) that is active for promoting cell migration and/or angiogenesis under cell growth promoting conditions comprising an IGD-containing peptide,

Angiogenic composition comprising peptides containing isoleucine-glycine-aspartic acid, that stimulate cell migration, and angiogenic growth factor useful for promoting myocardial or peripheral angiogenesis.

WPI; 2003-697294/66.

The invention relates to an angiogenic composition (I) comprising at least one peptide chosen from a group of peptides containing isoleucine-glycine-aspartic acid (IGD-containing peptide), and at least one angiogenic growth factor other than the at least one peptide, where the peptide stimulates cell migration. Also disclosed is a composition (III) that is active for promoting cell migration and/or angiogenesis under cell growth promoting conditions comprising an IGD-containing peptide, and a matrix material. Compositions of the invention are useful for promoting myocardial angiogenesis which involves administering (I) or individual, to enhance vascular endothelial cell migration and/or promoting endance vascular endothelial cell migration and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             migration and/or proliferation surficient to receptable carrier in flow to the ischaemic tissue. The physiologically acceptable carrier in the composition is polyvinyl pyrrolidone. The current sequence represents an IGD-motif peptide that is specifically claimed in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Angiogenic composition comprising peptides containing isoleucine-glycine-
aspartic acid, that stimulate cell migration, and angiogenic growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                 sequence of a Bifidobacterium genome selected from the nucleotide consequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at CL least 90% identity or which hybridises with the sequence exhibiting at CC least 90% identity or which hybridises with the sequence siven in CC ABQ81843. Also described is a polymucleotide (II) encoding a CC fusion protein, comprising a sequence selected from 1097 sequences given in ABP65258 to ABP66354 ligated in frame to a polymucleotide encoding a CC heterologous polypeptide. (I) has antidiarrheic and antibacterial CC activities, and can be used as an inhibitor of Salmonella. (I) (which is a probe) is useful for the detection and/or identification of Bifidobacterium longum in a biological sample. A carrier containing the lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be used for preventing and/or treating diarrhoea brought about by pathogenic containing and/or rotarirus. The carrier is a food composition selected from milk, yogurt, curd, cheese, fermented milks, milk based fermented convolutes, ife-creams, fermented cereal based products, ice-creams, fermented cereal based products of the carrier form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        selected from tablets, liquid bacterial suspensions, dried oral supplement, wet oral supplement, dry tube feeding or wet tube feeding. (1) is useful in DNA arrays or chips to carry out analysis of the expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent Bifidobacterium related nucleotide sequences given in the Sequence jisting from the present invention but not mentioned further within the specification. N.B. The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the European Patent Office
The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant the plant is a crop plant such as maize or soybean.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 443
                                                                                                                                                                                                                                                                                New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Cao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (CAOY/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant properties. CC improved plant properties e.g. improved plant properties e.g. improved plant properties e.g. improved cold, heat or drought tolerance, CC increased resistance to plant disease, better growth rate by modification CC increased resistance to plant disease, better growth rate by modification CC increased resistance, modified seed oil or protein yield and/or CC content, improved yield by modification of carbohydrate, nitrogen or CC content, improved yield by modification of carbohydrate, nitrogen or CC phosphorus use and/or uptake, by modification of photosynthesis or by CC providing improved plant growth and development under at least one stress CC condition, improved lignin production or improved galactomannan CC production. Note: The sequence data for this patent did not CC form part of the printed specification but was obtained in electronic CC format from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not constant from USPFO at sequence data for this patent did not con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

The present sequence cc represents a procein fragment containing variable portions of the type II copoisomerase for Rickettsiae rickettsii for use in the database. The cc a single sample without using multiple probes. It can accurately contaminated food products, tissue or fluid samples from diseased humans, cc (Updated on 25-MAR-2003 to correct pf field.) (Updated on 27-AUG-2003 to correct pf field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

The present sequence is a polypeptide encoded by one of a large number of 5. ESTs derived from mRNAs encoding secreted proteins. The 5. ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3. untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT
                                                                                                                                                                                                                                                                                                                              New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and fo

Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                         New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for
                                                                                                                                                                                                                                                                                                                                                                                                                     16-OCT-2003.

```

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid grobes for measuring human gene expression (comprising a plurality of single exon nucleic acid probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a vector comprising at least 8 measuring than gene expression, a vector comprising at least 8 measuring at least 8 measuring the single exon of the position of the single exon probe cited above, an ORF-encoded peptide comprising at least 8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing human gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe cited above. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human-single exon probe protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at segdata.uspto.gov/sequence.html?DocID=20030194704
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alternations in the genomic locus that includes their exon, in assessing alternations in the genomic locus that includes their exon, in assessing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Dumas Milne Edwards
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  06-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; 5' EST;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
```

The present sequence is a property secreted proteins. The 5' ESTs were 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated tissues.

Claim 13;

SEQ ID NO 5489; 71pp + Sequence Listing; English.

polypeptide encoded

by one of a large number of proteins. The 5' ESTs were

The present sequence is a psychology of the present sequence is a psychology of the present and present the presen

Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors

Sequences AAU18508-AAU18551 represent the cytoskeletal element-related CC polypeptides of the invention. Cytoskeletal polypeptides and their CC associated polynuclectides are useful in the diagnosis, treatment and CC prevention of various types of disorders in e.g. humans, mice, rabbits, CC goats, horses, cats, dogs, chickens or sheep. A pathological condition CC can be determined by determining the presence or absence of a mutation in CC a cytoskeletal polynuclectide. The treatable disorders include autoimmune CC diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as CC cardiac arrest, cerebrovascular disorders such as crebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal confiction, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as gromature labour and infertility, as glomerulonephritis and respiratory disorders such as asthma. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities.

copolypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endopthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The colypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to chargulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as chargulatic agents for determining P. acnes presence, for example, by can patent did not form part of the printed specification, but was cobtained in electronic format directly from WIPO at

CC polypeptides encoded by the polymucleotides (ABM35624-ABM6436) and to CC immunogenic fragments of P. acnes polypeptides. The invention also relates to CC immunogenic fragments of P. acnes polypeptides. The invention CC additionally encompasses expression vectors and host cells comprising a CC polymucleotide of the invention; antibodies against polypeptides of the invention; a CC method for stimulating an immune response specific for a P. acnes CC polypeptide and an isolated T cell population comprising P. acnes polypeptides, antibodies, antibodies, fusion proteins, T cell populations, or CC polymucleotides, antibodies, fusion proteins, T cell populations, or CC polymucleotides, antibodies, fusion proteins, T cell populations, or CC patient; and a method for inhibiting the development of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient. The P. acnes polypeptides, polymucleotides, antibodies, fusion CC proteins, Total populations or antigen-presenting cells that express the polypeptides are useful for diagnosting, preventing or treating acnes composition is useful for the stimulation of an immune response specific for a P. acnes composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

as glomerulonephritis and respiratory disorders such as as glomerulonephritis and respiratory disorders such as asthma. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sumburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published pct sequences
                                                                                                                                                                                                                                           Sequences AAU18508-AAU18551 represent the cytoskeletal element-related polypeptides of the invention. Cytoskeletal polypeptides and their associated polymucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by determining the presence or absence of a mutation in a cytoskeletal polymucleotide. The treatable disorders include autoimmune
                                                                                                                               diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as cropations.
                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated human cytoskeletal element-related polypeptide useful for diagnosis/treatment of neoplastic disorders, disorders associated with neural transmission, chromosomal abnormalities, autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                08-NOV-2000;

                                The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system diagraes, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the content of the content of cancer.
                                                                                                                                                                                                                                                                                                                                Tang
Ma Y,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia;

This is encoded by a gene that has been identified as being up-regulated in 2 models of chronic pain, i.e. streptozocin-induced diabetes and chronic constrictive injury to a nerve leading to the spine. The expression products of such genes can be used to screen libraries for compounds and peptide agonists and antagonists of gene product activity that may be useful in the treatment or prevention of chronic pain, and in the development of diagnostic tools for the identification and

                                                                                                                                                                                                                                                                                                                                                                                                                  assessing whether a patient is afflicted with prostate cancer. The method of the invention involves assessing whether a patient is afflicted with prostate cancer by comparing the level of expression of a marker in a patient sample and the normal level of expression of the marker in a control non-prostate cancer sample, where a significant increase in the level of expression of the marker in the petient sample and the normal level of expression of the marker in the petient sample and the normal level indicates that the patient is afflicted with prostate cancer. Nucleic acids of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequences given in ADB75.17-ADB75.611 represent marker cDNA and proteins. Note: The sequence data for this patent did not form part of the printed specification, but that the patient of cormat directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                        for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidlabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12-APR-2002;

                                                                                                                    The present invention describes a method for identifying a candidate Chkl can pathway modulating agent. The method comprises: (a) providing an assay comprises and comprises and assay comprises a modifier of Chkl (MCHK) polypeptide or nucleic acid; (b) contacting the system with a test agent, where the system provides a creference activity except in the presence of the test agent; and (c) contacting a test agent-biased activity, and a difference between the test agent-biased activity and the reference activity. Also described: (1) a composition of the described: (1) a composition of the described: (1) a composition of the described: (2) a method for modulating chkl pathway of a cell; (2) a method for modulating composition for diagnosing a composition of the present apathway. The method is useful for identifying a candidate contracting e.g., cancer. The present sequence represents a human MCHK protein, which is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                   RESULT 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC polypeptides. The proteins and their associated DNA sequences are used in CC the treatment, prevention and diagnosis of medical conditions caused by CP acnes. The disorders include SAPHO syndrome (synovitis, acne, compared by CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CC pervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the CC presence or absence of P. acnes in a patient comprises contacting a CC sample with a binding agent that binds to the proteins of the invention CC and determining the amount of bound protein in the sample. The CC polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to CC downregulate expression and activity of P. acnes polypeptides and cC therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by C enzyme linked inmunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was CC obtained in electronic format directly from WIPO at

The invention relates to an isolated polynucleotide (ACF64435-ACF64733) concoding a Propionibacterium acnes protein. The invention also relates to composition also relates to composition fragments of P. acnes polypeptides. The invention also relates to comprising a polypeptides. The invention and to composition fragments of P. acnes polypeptides. The invention accomprising a polypeptide of the invention; antibodies against polypeptides of the composition; a method for stimulating an immune response specific for a P. acnes composition (comprising P. acnes polypeptides, polypeptide and an isolated T cell population comprising P. acnes polypeptides, composition; a method for stimulating an immune response specific for a P. acnes composition (comprising P. acnes polypeptides, polypucleotides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient. The P. acnes polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne compositions, or nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response specific for a P. acnes for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response specific for a P. acnes for concluding frame) contained within the P. acnes polymucleotides of the convertion. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a novel nucleic acid molecules isolated from CC pathogenic Borrelia bacteria that each encode a variable major protein CC (VMP)-like sequence (VLS) peptide. Specifically, it refers to recombinant CC VLS genes and immunogenic compositions derived thereof, from Borrelia CC parinii (B. gazinii) and Borrelia afzelii (B. afzelii). The present CC invention describes the use of antibodies against the expressed VLS CC proteins where immunologic binding is indicative of a Borrelia infection, CC in particular infections that include Lyme disease, relapsing fever or CC related diseases in humans and animals. Accordingly, these antibacterial CC compositions can be used for gene therapy, immunoprophylaxis, diagnosis CC or treatment of such diseases, which due to the VMP antigenic variation CC system often evade the immune system response despite the occurrence of host antibody and cellular responses. This polypeptide is a protein CC encoded by a Borrelia afzelii strain ACAI open reading frame DNA sequence of from the vis locus silent cassette of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by determining the presence or absence of a mutation in a cytoskeletal polymuclectide. The treatable disorders include autoimmune diseases such as rheumatoid attrictis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral ischaemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as gastrointestinal disorders such as Crohn's disease, renal disorders such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences AAU18508-AAU18551 represent the cytoskeletal element-related polypeptides of the invention. Cytoskeletal polypeptides and their associated polynucleotides are useful in the diagnosis transfer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-AUG-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; cytokine; cell proliferation; cell differentiation; gene th vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 06-NOV-2001 (first entry)

The polymucleotides and polypeptides in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity in the diagnosis and/or treatment of cancer, leukaemia, nervous system disporders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2001-476283/51.

Claim 22; SEQ ID NO

97; 182pp; English

The invention relates to a recombinant DNA construct comprising a promoter functional in plants operably linked to an oil-associated gene. The construct is useful for transgenic plant seed which has in its genom the construct, that is functional in the plant to transcribe the oil-

in its genome the oil-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a novel nucleic acid molecules isolated from pathogenic Borrelia bacteria that each encode a variable major protein (VMP) like sequence (VLS) peptide. Specifically, it refers to recombinant VLS genes and immunogenic compositions derived thereof, from Borrelia garinii (B. garinii) and Borrelia afzelii (B. afzelii). The present invention describes the use of antibodies against the expressed VLS proteins where immunologic binding is indicative of a Borrelia infection, in particular infections that include Lyme disease, relapsing fever or related diseases in humans and animals. Accordingly, these antibacterial compositions can be used for gene therapy, immunoprophylaxis, diagnosis or treatment of such diseases, which due to the VMP antigenic variation system of ten evade the immune system response despite the occurrence of host antibody and cellular responses. This polypeptide is the Borrelia afzelii strain ACAI vls ORF 13 protein expressed by the pBA-13-1 plasmid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   maize, plant; oil-associated gene; transgenic; enhanced seed oil; vegetable oil.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Maize oil-associated gene protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           06-MAY-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15-MAR-2002; 2002US-0365301P.

              The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polymucleotide encoding a polymeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant having an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polymucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    producing producing
                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Recombinant DNA construct; transformed plant; improved plant property; delt tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (CAOY/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 342

The transgenic plant seed grows into a plant having seed oil as compared to wild type. The construct is useful for hybrid maize seed. The transgenic plant seed is useful for yegetable oil. The present sequence represents the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    VGDIGD

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polyneptide from a microbial source. The invention also relates to a transformed plant

New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant CC having an improved property comprises transforming a plant with the CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant properties. CC The recombinant DNA construct is useful for producing plants with CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC increased resistance to plant disease, better growth rate by modification CC increased resistance to plant disease, better growth rate by modification CC increased resistance to plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or CC content, improved yield by modification of carbohydrate, nitrogen or CC phosphorus use and/or uptake, by modification of photosynthesis or by CC providing improved plant growth and development under at least one stress CC condition, improved lignin production or improved galactomannan CC production. Note: The sequence data for this patent did not CC form part of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not construct the construction of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not construct the construction of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not construct the construction of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not construct the construction of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not construct the construction of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 10-JAN-2001
                         This sequence represents mouse GAMP protein. The invention relates to the mosue and human GAMP proteins (AAB22942, AAB22943) which are 210 kD in size, have kinase activity and participate in signal transduction during abnormal B cell differentiation. The invention also encompasses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   24-FEB-1999;

                        Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogeni polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnost of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and ostcomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to transgenic non-human animals and their offspring which are transformed with germinal center associated nuclear protein (GANP) gene. The GANP gene, encoded protein and transgenic animals express GANP can be used for the production of high-affinity antibodies to viral antigens for treatment and prevention of infection by viruses such as human immunodeficiency virus and hepatitis C virus. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                           Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for treating acne vulgaris.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2001-616774/71.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (BLISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention, antibodies against polypeptides of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising P. acnes polypeptides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a
                                                                                                                                                                                                                                                                                                                                                                                                                                 Mitcham JL, Skeiky YAW, Pe

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein. The polynucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present sequence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from wrop as free wine in the house of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                WPI; 200

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogen polypeptides. The proteins and their associated DNA sequences are used the treatment, prevention and diagnosis of medical conditions caused by p. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central P. acnes is also involved in infections of bone, joints and the central P. acnes is also involved in infections of bone.

Example 1; SEQ ID NO 20489;

1069pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising P. acnes polypeptides, a vaccine composition (comprising P. acnes polypeptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mitcham JL, Skeiky YAW, Pers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      388888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC polynucleotides, antibodies, fusion proteins, T cell populations, or cc antigen-presenting cells that express the polypeptide); a method and kit CC for detecting or determining the presence or absence of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion CC proteins, T cell populations or antigen-presenting cells that express the CC polypeptides are useful for diagnosing, preventing or treating acne CC vulgaris, or for stimulating an immune response specific for a P. acnes CC protein. The polynucleotides can also be used as probes or primers for CC cucleic acid hybridisation. The vaccine composition is useful for the CC stimulation of an immune response against P. acnes, or for treating acne, CC and the kit is useful for performing a diagnostic assay. The present CC sequence represents a polypeptide predicted to be encoded by an ORF (open CC reading frame) contained within the P. acnes polynucleotides of the CC invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                       New isolated nucleic acids kandleri proteins, and the

The invention comprises the amino acid sequence of proteins from the hyperthermophile Methanopyrus kandleri, the invention also comprises the complete genome from Methanopyrus kandleri. The Methanopyrus kandleri proteins of the invention are useful for enhancing the stability and/or activity of other proteins. The Methanopyrus kandleri genome is useful in

is useful in

as diagnostic agents.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
The present invention describes a nucleic acid molecule (I) selected from CC DP119, DP444, DP810, DP685, WE474, DP160, RA977 and RA770, or its encoded CC polypeptide, or a fragment or variant of the nucleic acid or polypeptide, (CC or an effector/modulator of the nucleic acid or polypeptide. (I) is used CC in manufacturing a pharmaceutical agent, in monitoring or controlling the CC function of a gene or gene product influenced or modified by a DP119, CC DP444, DP810, DP685, WE474, DP160, RA977 or RA770 polypeptide. (I) has CC in gene therapy. (I) is useful for diagnostic or therapeutic CC applications, or for manufacturing an agent for diagnosts, monitoring, CC prevention or treatment of pancreatic disorders, such as diabetes and CC related disorders, as well as neurodegenerative disorders and other CC treatment, alleviation and/or prevention, of a pancreatic dysfunction CC (e.g. diabetes, hyperglycaemia or impaired glucose tolerance), and CC others, in cells, cell masses, organs and/or subjects. It is also used CC for regenerating or for promoting the differentiation and/or function of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a variety of diagnostic and analytical methods. The present amino acid sequence represents a Methanopyrus kandleri protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 87
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequence
                                                                                                                                                                                                                                                                                                                                                                     Use of DP119, DP444, DP810, DP685, WE474, DP160, RA977 or RA770 nucleic acid molecules or polypeptides, or their effectors or modulators, for manufacturing an agent for the diagnosis, prevention or treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     non-human animal which over- or under-expresses the DP119, DP444, DP810 DP685, WE4774, DP160, RA977 or RA770 gene product. In addition, the nucleic acid molecule, polypeptide or an effector/modulator of the nucleic acid or polypeptide, is used in monitoring or controlling the function of a gene or gene product influenced or modified by a DP119, DP444, DP810, DP685, WE474, DP160, RA977 or RA770 polypeptide, or in identifying substances that interact with the polypeptide. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay;
Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a partient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The

encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (BLISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Zhang
                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polynucleotide (ACF64435-ACF64733)

The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein. The polynucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present sequence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polynucleotides of the
                        The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Propionibacterium acnes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Propionibacterium acnes immunogenic polypeptide #30191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20-OCT-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC antigen-presenting cells that express the polypeptide); a method and kit CC for detecting or determining the presence or absence of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the CC polypeptides are useful for diagnosing, preventing or treating acne CC polypeptides are useful for diagnosing, preventing or treating acne CC vulgaris, or for stimulating an immune response specific for a P. acnes CC protein. The polynucleotides can also be used as probes or primers for CC nucleic acid hybridisation. The vaccine composition is useful for the CC stimulation of an immune response against P. acnes, or for treating acne, CC and the kit is useful for performing a diagnostic assay. The present CC sequence represents a specifically claimed P. acnes polypeptide which is CC contain an immunogenic region. Note: The sequence data for CC this patent did not form part of the printed specification, but was CC contain an electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

밁 Ś

The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates t polyneptides encoded by the polynucleotides (ABM35624-ABM64538) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; antibodies against polypeptides of the invention; as a polynucleotide of the invention of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
cc P. acnes is also involved in infections of bone, joints and the central
cc nervous system, however it is particularly involved in the inflammatory
cc lesions associated with acne vulgaris. A method for detecting the
cc presence or absence of P. acnes in a patient comprises contacting a
cc sample with a binding agent that binds to the proteins of the invention
cc and determining the amount of bound protein in the sample. The
cc polypeptides may be used as antigens in the production of antibodies
cc specific for P. acnes proteins. These antibodies can be used to
cc downregulate expression and activity of P. acnes polypeptides and
cc therefore treat P. acnes infections. The antibodies may also be used as
cc diagnostic agents for determining P. acnes protein, by
cc enzyme linked immunosorbent assay (ELISA). Note: The sequence data for
cc this patent did not form part of the printed specification, but was
cc obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Local

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0
```

밁 S

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping,

gene mapping,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc and in recombinant production of (II). The polynucleotides are also used cc in diagnostics as expressed sequence tags for identifying expressed cc genes. (I) is useful in gene therapy techniques to restore normal cc activity of (II) or to treat disease states involving (II). (II) is completely for generating antibodies against it, detecting or quantitating a cc polypeptide in tissue, as molecular weight markers and as a food cc supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders creating aberrant protein expression or biological activity. The cc diagnostics foremaics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity cand to produce other types of data and products dependent on DNA and cand sequences. ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at creaming in the print of the print
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
New nucleic acid from Ashbya gossypii, useful, when modulated, for producing fine chemicals, e.g. amino acids, encodes membrane-construction or -transport proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Fungus; membrane transport; organic acid; amino acid; fatty acid; purine; pyrimidine; nucleotide; nucleoside; lipid; diol; carbohydrate; aromatic compound; vitamin; riboflavin; fodder; food; cosmetic; pharmaceutical; genome mapping; protein structure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29-AUG-2003

Also (I) are used for identification and characterisation of A. gossypi and related corganisms, as primers and probes for detection and amplification of (I) are used for identification, in genomic mapping and for functional studies on proteins, for evolution or protein structure investigations. Modulating the activity of (I) may improve yields, production and/or efficiency of production of fine chemicals by A. gossypi. Particularly the cells show control or proteins or nucleic acids, so viability is improved. Cc improved transport of waste products from the cell, before these cannot controlled for the control of (I) may also allow control over the relative amounts of cdifferent lipids or fatty acid molecules produced. (Updated on 29-AUG-2003 to standardise or fatty acid molecules produced. (Updated on 29-AUG-2003 to standardise of field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
